Why smart window tint?

Smart window tint is just another example of how a business and a home can be smarter.

Dimmable windows can be turned on or off at the click of a remote or the tapping of a button. The windows take mere milliseconds to switch between on and off, giving you virtually no lag time between. The visual effect of tinted windows looks great in any environment and can give your office space the trendy edge you've been looking for.

Electric film can be installed on any type of window, including both interior and exterior windows, so we can work with the windows already in place. Smart window tint is a versatile and beautiful addition to any existing window in your home or office.

Why work with ElectraTint?

We are not your average window tinting company. Our team of professionals can service anywhere in the US, and we pride ourselves on high quality installation and a pleasant customer experience.

We are the only turnkey smart window film installation company in the industry. What this means is that you only have to call one company to get this done right the first time. We sell the film, install the film, set up the electrical work, and even do the necessary trim work to finish off the look.

Because of our expertise and professionalism, the average job can be completed in 2-3 weeks, from order to installation. We know installing smart window tint for your business or home is a big investment, so we make sure you are comfortable and confident in the work throughout the process.

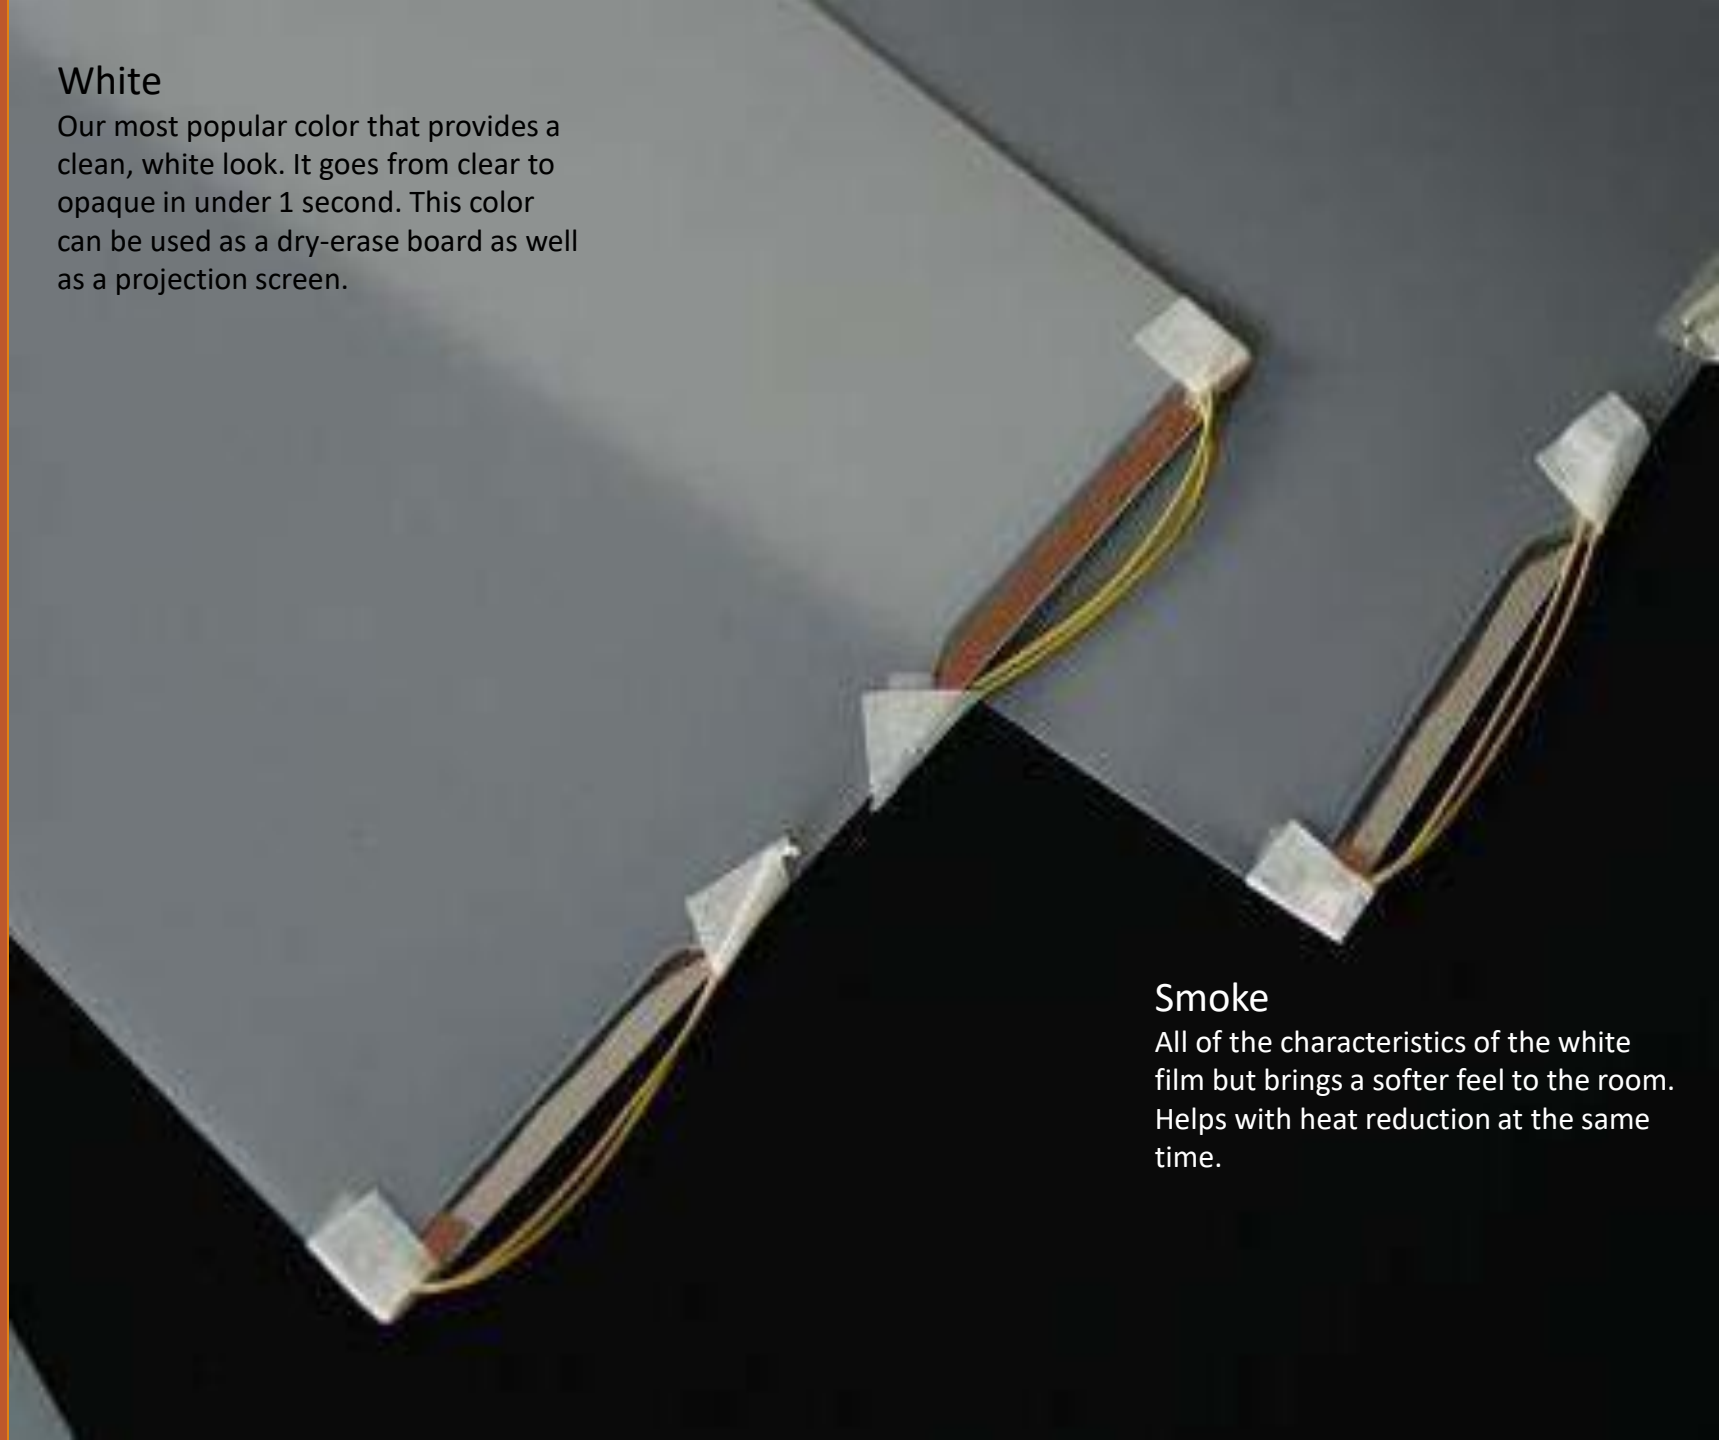

Smart PDLC Film

White

Our most popular color that provides a clean, white look. It goes from clear to opaque in under 1 second. This color can be used as a dry-erase board as well as a projection screen.

Smoke

All of the characteristics of the white film but brings a softer feel to the room. Helps with heat reduction at the same time.

Film Specifications

TECHNICAL SPECS

- Operating Voltage * 65VAC or 75VAC
- Power Consumption * 5W/sq. meter
- Frequency * 50~60HZ
- Ampere * 60mA/sq. meter
- Speed Time * On to off 100ms, off to on 10ms

OPTICAL CHARACTERISTICS

- Haze * 2% on
- Visible Angle * 160 degree
- UV Block * 99%

PHYSICAL SPECS

- Thickness * 0.4 mm
- Standard Size * 1* 3 meter/ 1.25*3 meter/
* 1.55*3 meter

ENVIRONMENT

- Operating Temperature Range * -20 to +70 Degree Celsius
- Storage Temperature * 25 degree
- Storage Humidity * 30%

LIFE SPAN

- On Status * 50,000 hours
- On and Off * 3 million times
- Time * 10 years

TRANSFORMER INFO

- Rated Power * 100W
- Rated Ampere * 2A
- Input Voltage * AC 110/120V
- Output Voltage * AC60VAC

WARRANTY

- 2 Year Limited on Film * Do-it-yourself installation
- 4 Year Limited on Film & Install * ElectraTint installation services^

^Restrictions Apply. Contact ElectraTint for Terms and Conditions

How do we cover up the electrical wiring?

The final and probably most important part of every installation is the hiding of the electrical connections on each piece of film.

To do this, we have partnered up with window manufacturing companies to ensure we get the best look possible.

This is commonly missed by other companies, or not discussed at all.

We take great pride in every aspect of the installation and cut no corners. Our goal is to make it seem like we were never there!

Brushed Nickel
